In The Claims

Amend claims 1-3, 10, 13 and 16 as set forth below.

- 3,10 C*
1. (Amended) Apparatus for forming heated glass sheets comprising:
a housing having a heated chamber;
an upper mold support assembly for supporting an upper mold within the heated chamber for cyclical vertical movement between upper and lower positions;
a lower mold shuttle for supporting a lower mold for cyclical movement between an idle position horizontally spaced from the upper mold and a use position below the upper mold; and
A1
a lower mold support assembly to which the lower mold is cyclically transferred from the lower mold shuttle in the use position to provide support thereof while permitting horizontal alignment of the lower mold with the upper mold as necessary upon each cycle of downward movement of the upper mold for cooperation of the molds to form a heated glass sheet between the molds.

2. (Amended) Apparatus for forming glass sheets as in claim 1 further comprising vertically movable rollers having an upper position that supports the lower mold shuttle during the cyclical movement of the lower mold between the idle and use positions and having a lower position at which the lower mold shuttle is moved downwardly with the lower
